NEW ATOM BOMB

The Reuters Agency announced that the English scientist Dr. Raphael E. Armatte informed the press that five Russian scientists, Ioffe, Kapitsa, Semyonov, Vavilov, and Zel'dovich, have developed a new atom bomb which is many times more effective than the Anglo-American bomb.

The new bomb depends on a screw-type detonating mechanism for the explosion. It uses less uranium and is adaptable for mass production.

Its effective horizontal range is 85 kilometers, and its vertical range is 10 kilometers. The temperature in a few moments after the explosion reaches several million degrees.
